

DAY 3 — Exploratory Data Analysis

Task

Analyze the job dataset.

Calculate:

- Number of jobs
- Number of unique job titles
- Most common job roles
- Jobs by location
- Average description length
- Minimum description length
- Maximum description length
- Missing values
- Duplicate records

Visualizations

Create:

1. Top job titles
2. Jobs by location
3. Description length distribution
4. Missing values
5. Top companies

Example

```
df["description_length"] = df["job_description"].str.len()
```

```
df["description_length"].describe()
```
